Are you a passionate vlogger who keeps making vlogs on every occasion but tired of editing them from your device? If yes, then VlogU Mod Apk is the perfect choice for you. Now, enjoy the ultimate fun of making 100s of vlogs and put all the burden of editing them on VlogU – Vlog Video Editor Maker. Introduce about VlogU VlogU is a powerful video editor that makes vlogging fun and easy. The application is packed with awesome features such as PIP Keyframe, Text Mixer, Wonderful Effects, Music and Sounds, and many others that will help you make your videos thrilling. As the name implies, VlogU is specially designed for vloggers with the help of which they can quickly create professional-quality videos right from their smartphone. One of the best things that I like most about this application is that it provides endless opportunities when it comes to editing things. Thanks to the Sticker Keyframe feature of this application that helps you to make short animations and cutscenes in your videos. There are various advantages of adding sticker keyframes as it engages users towards your videos. Feel free to use it for creating promotional videos and marketing your brand as it helps you to animate a sequence of images. Wonderful effects There are a variety of thrilling effects available in this video editor that comes with the capability to turn a normal video into an eye-capturing vlog. You can add these effects in a few clicks and the application will take a couple of seconds to implement them in your videos. Videos edited with the Slow Motion effect will play back at a slower speed, which can make movements and actions appear more elegant. This effect can be used to add drama or suspense to a scene or to highlight a particular moment. Feel free to adjust the speed of playback by dragging the slider left or right. However, when you are using Slow Motion, it’s important to keep in mind that using it too much can make your video look unnatural. Try to use it only when it really adds something to your video. PIP keyframe PIP keyframe is the most appreciated and helpful feature of the VlogU video editor app. With the help of this, you can create a picture-in-picture effect for your videos. It can be used to make things attractive or add dynamic and interesting elements to your videos. If you want to use the PIP keyframe in your vlog or normal videos, then you need to add two or more video clips to your project. After that select the clip you want to be in the front and set a keyframe. When the process of Keyframe is done, you can then drag the clip that will be in the background around until you get the desired placement. You can also adjust the size and opacity of each clip to create the perfect effect. Video Merger with Transitions If you love making longer videos then the video merger feature of this application is going to help you a lot. With this app, you not only can merge the videos but also add transition effects to them. VlogU comes with a wide range of built-in transition effects. You can choose from basic fades and wipes, or go for something more trending like a 3D cube or light tunnel effect. You just need to select two or more videos in the app’s media library and tap the merge button. The app will then automatically combine them into one seamless video with smooth transitions between each clip. You can also trim and crop your videos before merging them, so that they fit together perfectly. Mod APK Version of VlogU VlogU Mod Apk is a modded version of the official Vlog Video Editor Maker – VlogU application with the help of which you can edit your vlogs like a professional and export them in HD quality. Mod features Vip Unlocked – VlogU includes both free and premium features and for using paid features you have to purchase a VIP subscription that costs around $10 for a year and $20 for the lifetime.
