CWP 100
WRO 111-114 (Chem)

A CWP 100 system for high quality, convenient, cost-effective and flexible operation

The chemical version of the CWP 100 system integrates the reverse osmosis unit and the distribution system to give you a simple disinfection procedure, supervised and monitored through a number of functions. Gambro dialysis machines can also be integrated to form an unbroken hygienic chain and a high microbiological quality of the dialysis fluid at all times.

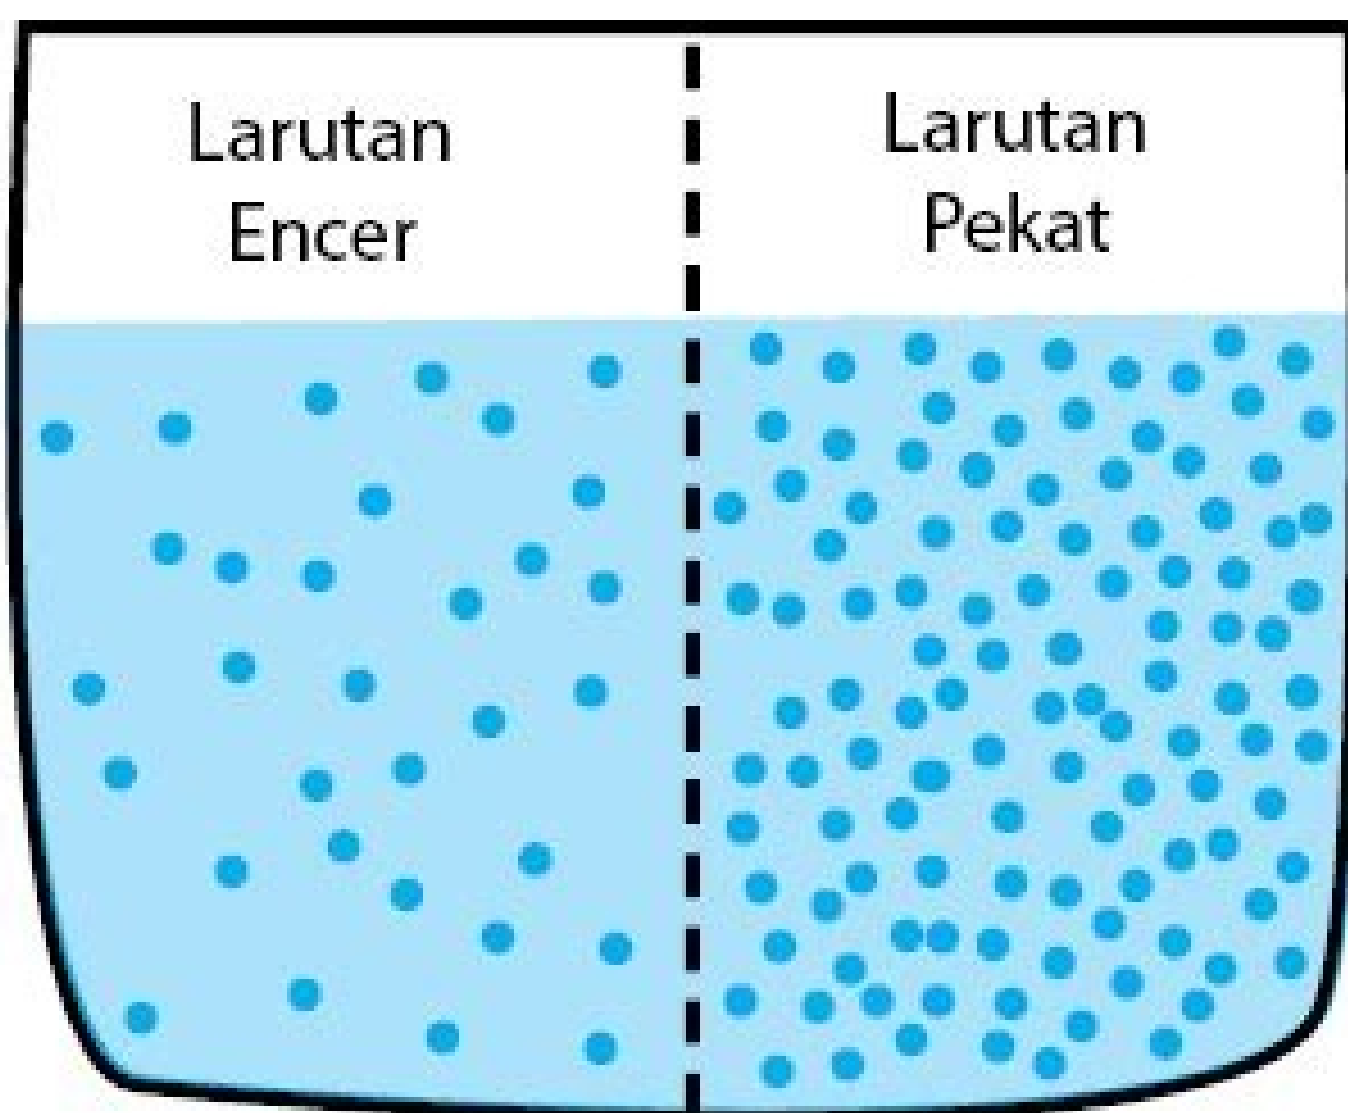

The user-friendly control panel makes operation simple. And the compact design and low noise level enable installation right next to your dialysis clinic.

The disinfection cycle can run automatically overnight, eliminating the cost and inconvenience of personnel working on weekends to manually disinfect. Water is also saved through a system that monitors variations in consumption and automatically adjusts the reject flow to match your actual usage.

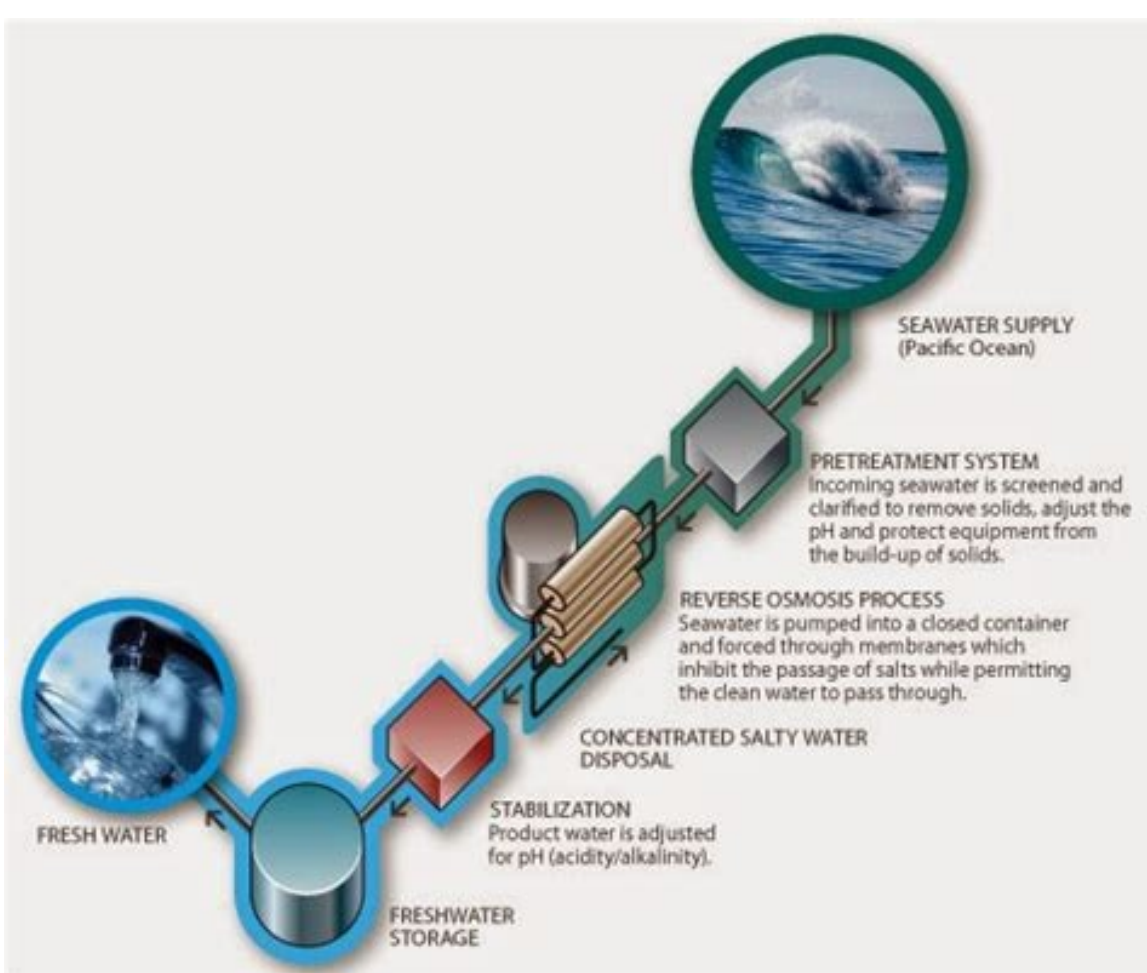

The CWP 100 (Chem) system is available in four different capacities (WRO 111-114) to suit your specific needs. In addition, the CWP 100 system can run in series with the CWP 80 system. This provides a two-stage filtration for even better water quality and also gives you the backup security of two independent units.

The best water for the best treatment

Membran Semipermeabel

PERKALIAN
 Perkalian adalah hubungan antara dua atau lebih unsur kimia yang membentuk suatu senyawa.
 Perkalian dapat terbentuk melalui beberapa cara, yaitu:
 1. Perkalian melalui reaksi redoks.
 2. Perkalian melalui reaksi asam-basa.
 3. Perkalian melalui reaksi pertukaran ion.
 4. Perkalian melalui reaksi substitusi.
 5. Perkalian melalui reaksi adisi.
 6. Perkalian melalui reaksi eliminasi.
 7. Perkalian melalui reaksi polimerisasi.
 8. Perkalian melalui reaksi kondensasi.
 9. Perkalian melalui reaksi kopulasi.
 10. Perkalian melalui reaksi lain-lain.
